Comments on LightSquared Technical Working Group Report IB Docket 11-109

Dear Ms. Dortch:

My group advocates for the end of discrimination against former inmates. We try to educate the public on reintegration efforts and how the success is critical for all. I believe that the creation of a national high speed broad band network that will provide affordable and accessible high speed internet to 95% of all Americans including marginalized and remote communities is key to reintegration efforts. This is why I urge you to recommend the commissions' approval of LightSquared's application for use of bandwidth.

The latest report from your Commission's working group on issues of potential interference seems to confirm this is negligible. It states, "...it does appear that the current test data that is available would demonstrate that LightSquared operations in the lower band (1526-1536 MHz) may be possible without harmful interference to cellular operations." pg. 87 We believe that LightSquared's continued concessions have successfully addressed issues of interference and this should satisfy concerns and your Commission should move to approve.

Respectfully,

Steven Huerta
